

NFRA has launched a cloud-based IT tool for its operations management.

NFRA has launched NFRA Core Application System (NCAS) for paperless working and works management. NCAS is designed to enable the collection, handling and processing of huge volumes of documents, end-to-end management of quality review, investigation, and enforcement activities. It enables the filing of statutory returns by the regulated entities, lodge complaints by the public, and process such complaints in NFRA. It also includes a Library module catering to the learning needs of the NFRA staff. NCAS is developed and maintained by NIC on behalf of NFRA.

NCAS Inauguration 24-09-2021
